

Nymo Rig Harbour Port of Arendal

Located at Eydehavn near Arendal, on the Southern Coast of Norway, Nymo provides services and facilities for the assembly of new floating rigs, upgrading and conversion of operational rigs and offshore vessels.

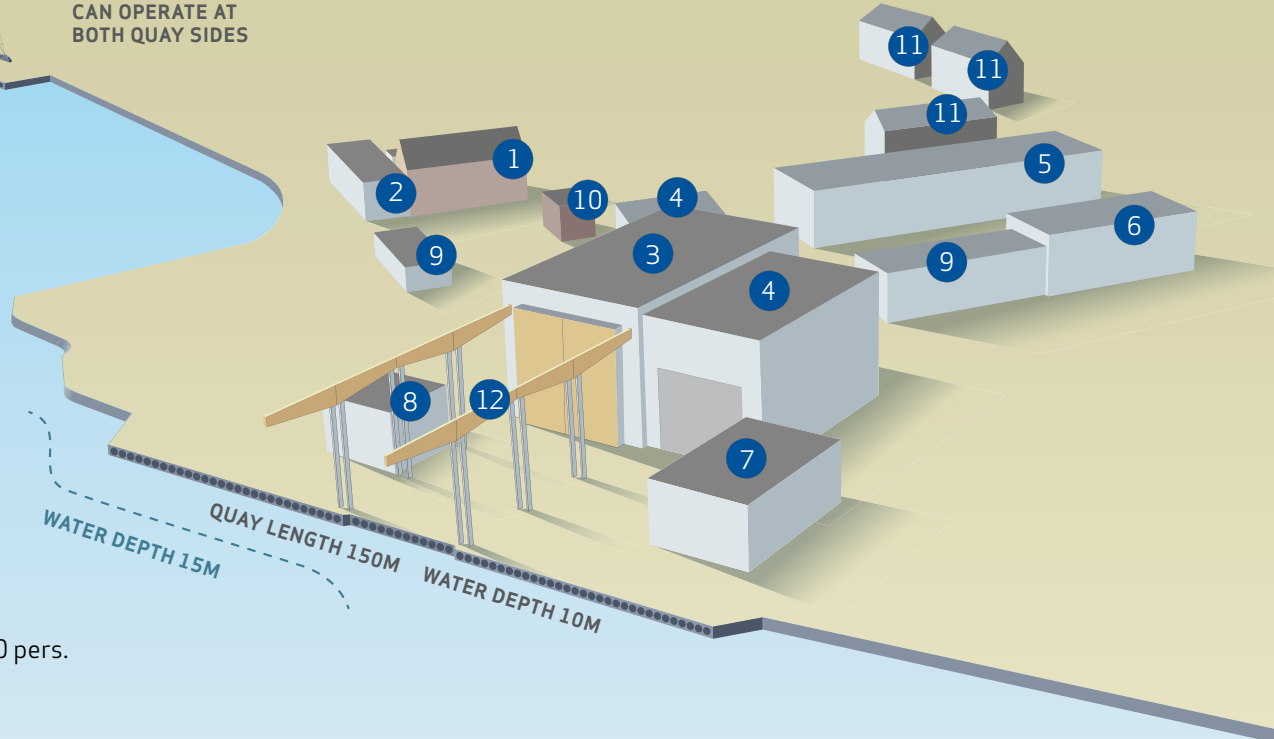

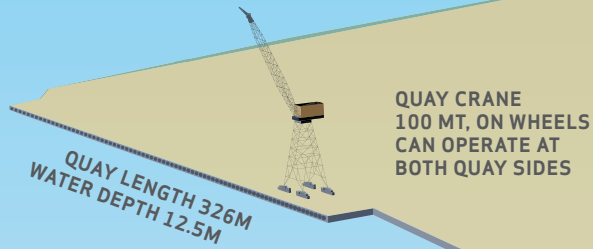

The facilities at Nymo Rig Harbour have, in recent years, developed into a modern fit-for-purpose yard. The yard is furnished with all relevant quay facilities, including assembly cranes, module prefabrication facilities and customer offices.

With over 4 decades in the Offshore Market, Nymo is an experienced supplier having completed a number of major offshore projects, carried out both in Norway and globally.

Nymo, an acknowledged total supplier to the industry, offers full EPCI services. Our newest target area is the establishment of the Rig Harbour at Eydehavn, where we have recently succeeded in securing a number of considerable construction, assembly and conversion contracts.

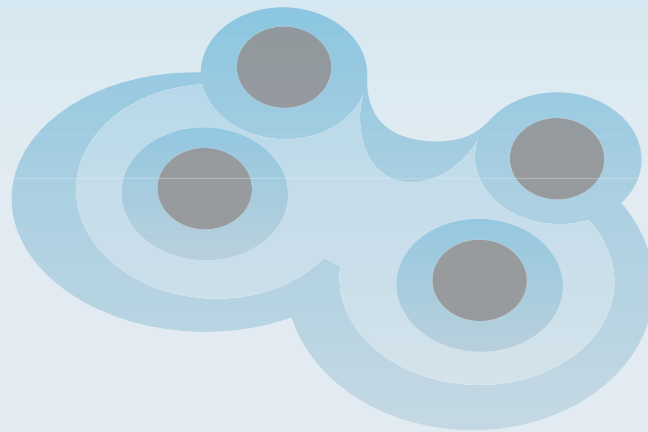

The cooperation with Port of Arendal secures Nymo access to large areas and resources, extending Nymo's own facilities.
